# Stock Trading Simulation System

BY MAHER YADAV

# Problem Statement

Stock trading involves buying and selling shares to earn profit.  
However, beginners often lack practical understanding of how trading works.

## Stock Trading Simulation System

### Goal:

-  Simulate stock buying and selling
-  Track portfolio value
-  Calculate profit or loss

# Our Solution

A menu-driven C++ application that simulates basic stock trading.

## Key Features

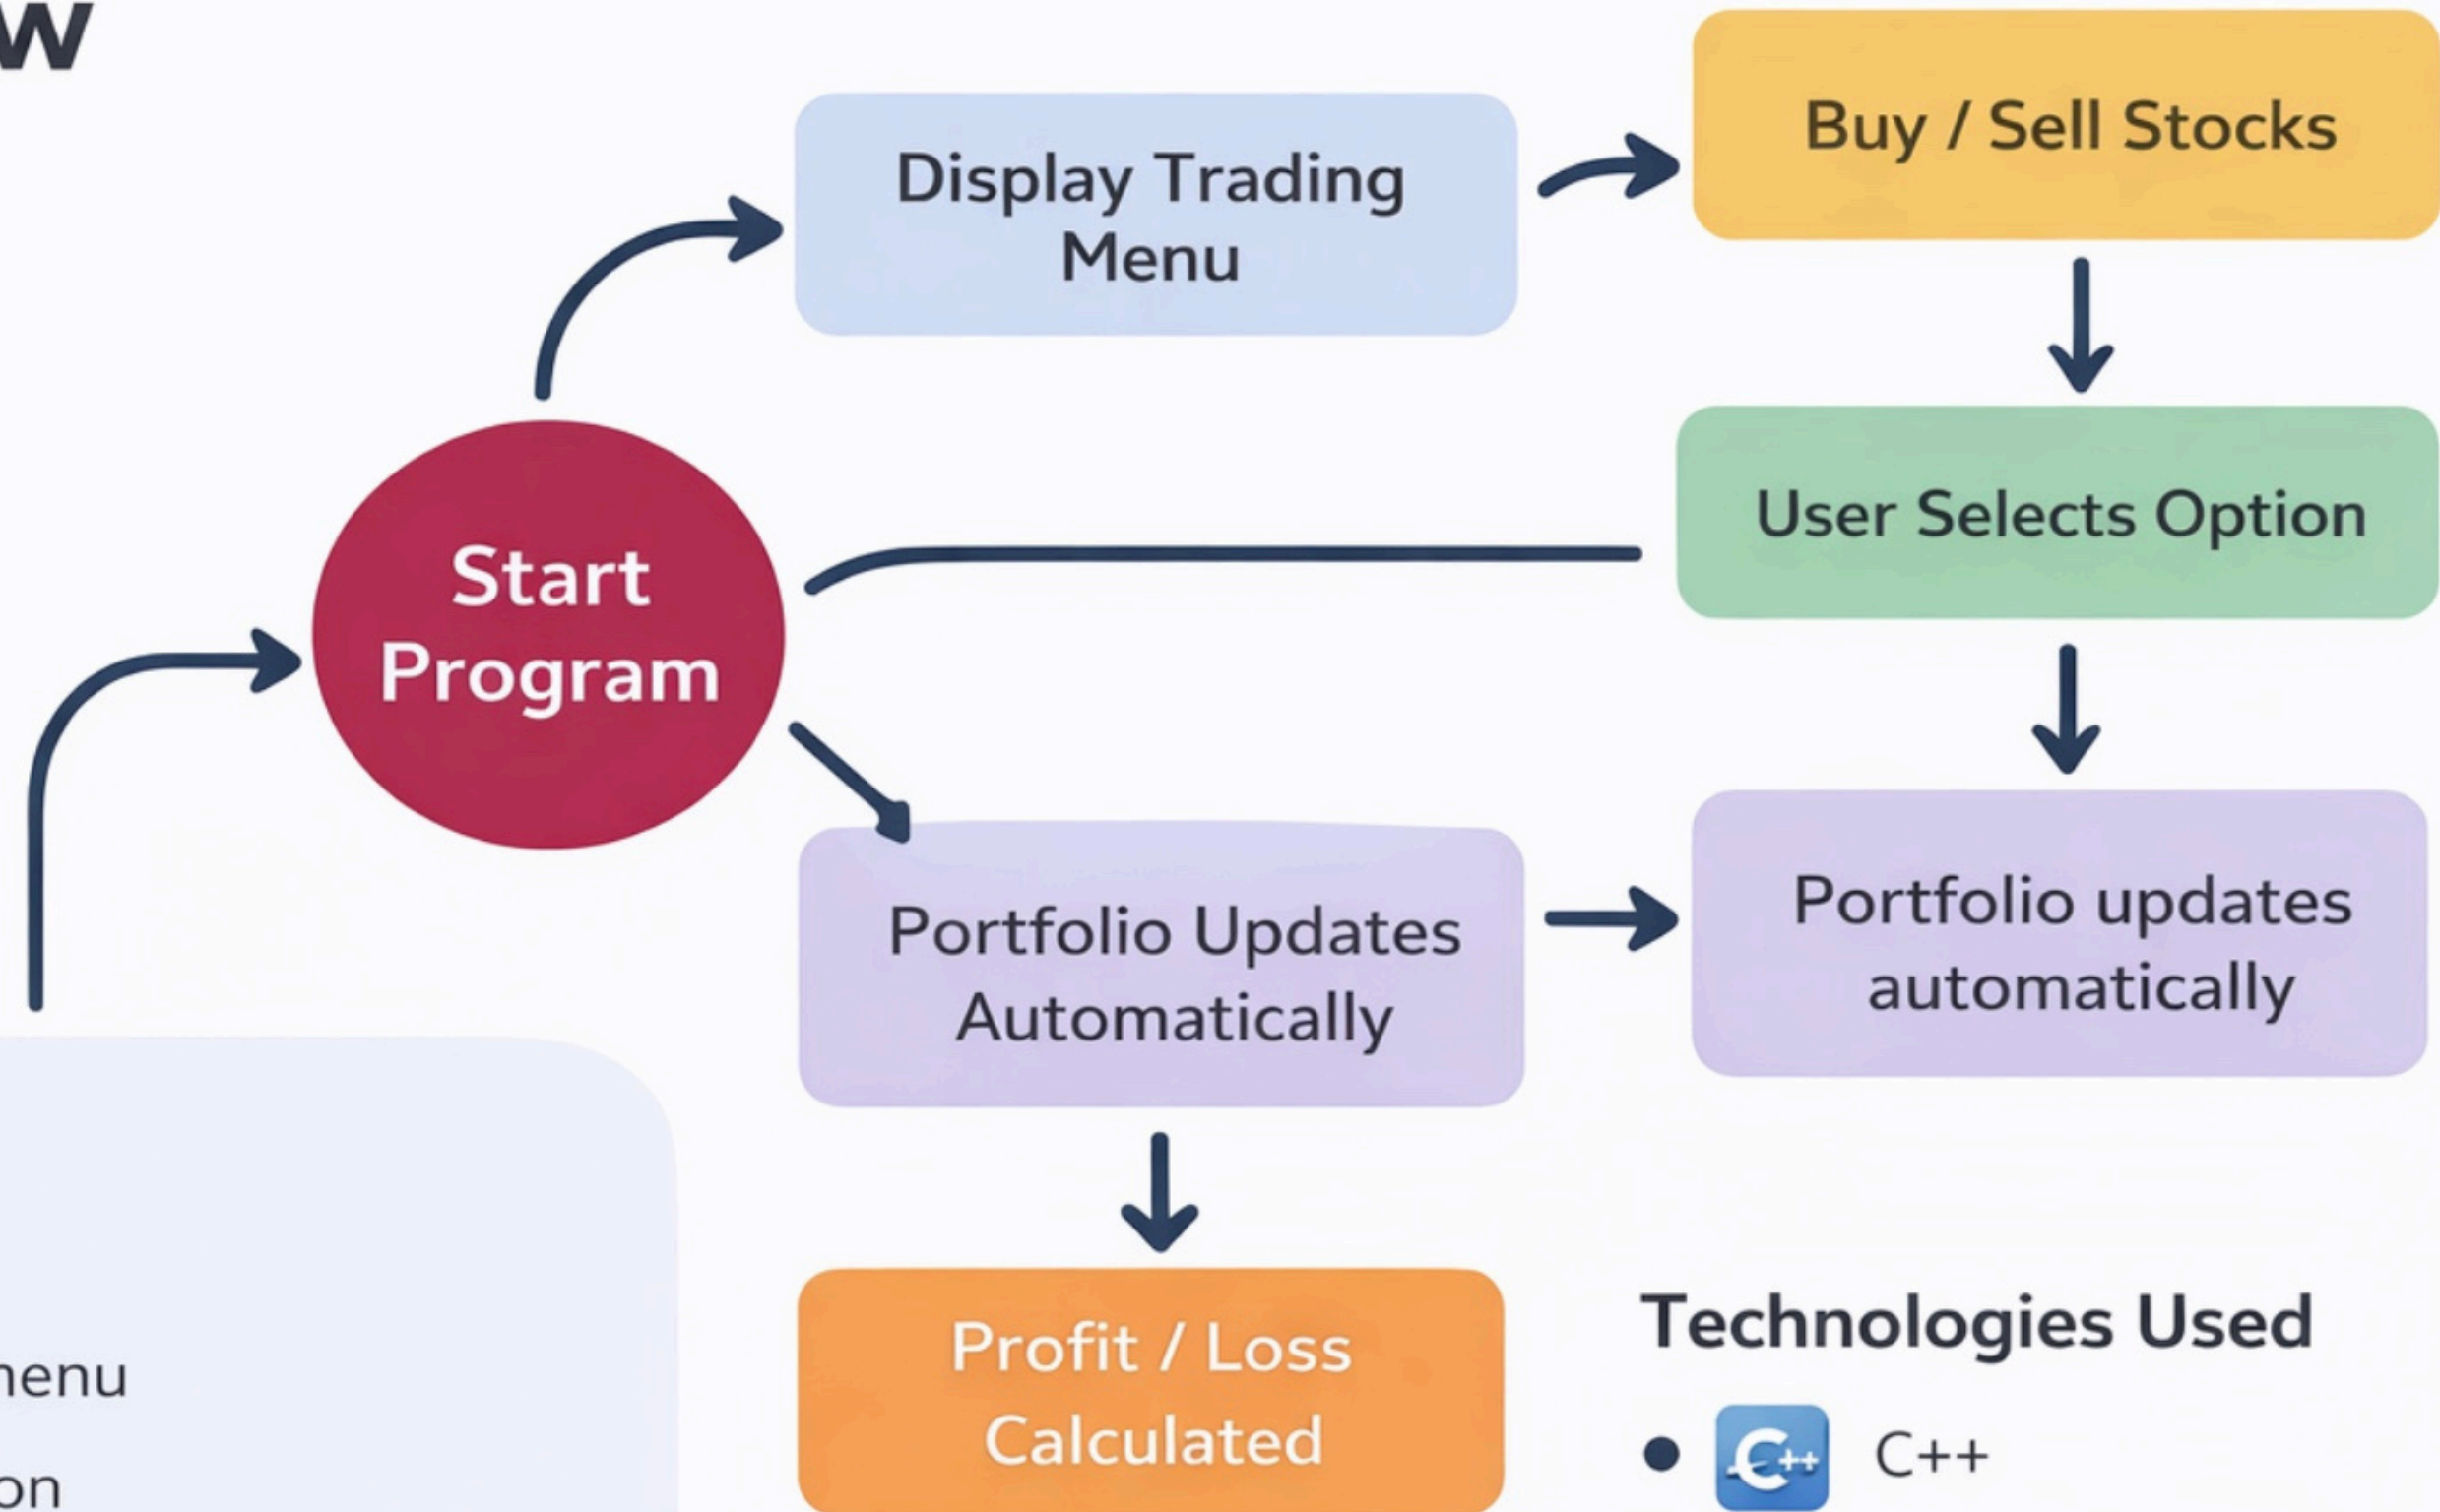

-  Display available stocks and prices
-  Buy stocks
-  Sell stocks
-  Track portfolio

This system helps users understand basic stock market operations.

# System Flow

## System Flow

1. Start program
2. Display trading menu
3. User selects option
4. Buy / Sell stocks
5. Track portfolio
6. Calculate profit or loss

## Technologies Used

-  C++
-  Object Oriented Programming
-  Arrays & Functions

# Conclusion

The project successfully simulates basic stock trading operations.

**Users can practice:**

 Buying and selling stocks

 Managing a portfolio

 Track portfolio

This system helps users understand basic stock market operations.
